Symbiosis Institute of Technology, Pune

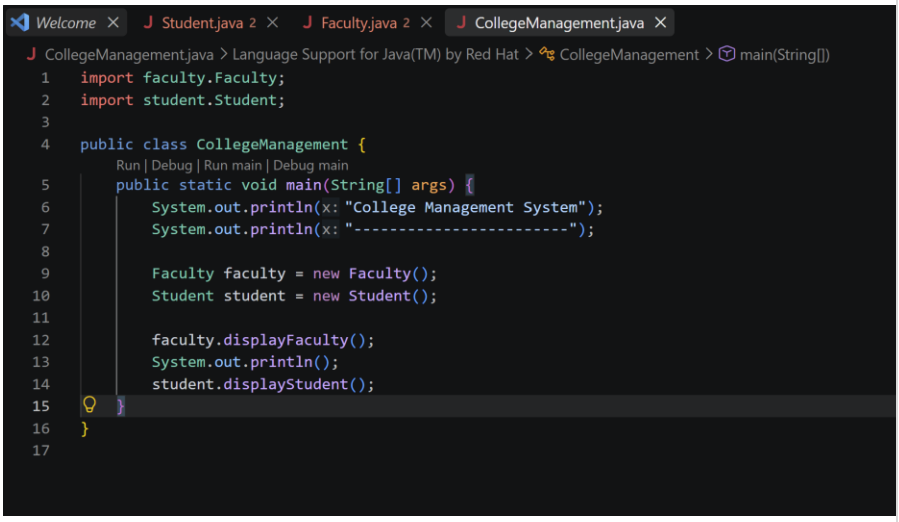

Faculty of Engineering

CSE - Academic Year 2026-27

Java Programming – Lab (Batch 2025-29)

Lab Assignment No:- 12

Name of Student	Abobakr mohamed elameen
PRN No.	25070122015
Batch	2025-29
Class	Programming with JAVA
Academic Year & Semester	2nd Year – 3rd sem
Title of Assignment	Write a Java program to create and use user-defined packages.
Practice questions	1. Create a Java program by developing user-defined packages for a College Management System. Create separate packages for student and faculty details, and display their information using classes from these packages.

student > Student.java > Java > Student

```java
package student;

public class Student {

    public void displayStudent() {
        System.out.println(x: "Student Name: Abdulrahman");
        System.out.println(x: "Roll No: 101");
        System.out.println(x: "Course: CSE");
    }
}
```

Welcome | Student.java 2 | Faculty.java 2 | CollegeManagement.java

faculty > Faculty.java > Java > Faculty > displayFaculty()

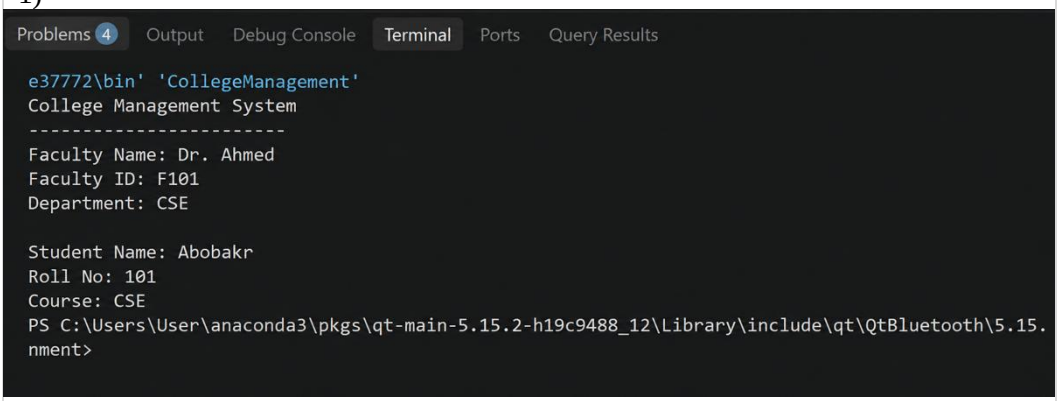

```java
package faculty;

public class Faculty {
    public void displayFaculty() {
        System.out.println(x: "Faculty Name: Dr. Ahmed");
        System.out.println(x: "Faculty ID: F101");
        System.out.println(x: "Department: CSE");
    }
}
```

2. Create a Java program by developing a user-define package named Library that contains a class to store and display book details such as book ID, title, author, and price. Import the package into the main program and display the book information.

```
Library > Book.java > Book > price
1   package Labrary;
2
3   public class Book {
4
5       int bookID;
6       String title;
7       String author;
8       double price;
9
10      public Book(int bookID, String title, String author, double price) {
11          this.bookID = bookID;
12          this.title = title;
13          this.author = author;
14          this.price = price;
15      }
16
17      public void displayBook() {
18          System.out.println("Book ID: " + bookID);
19          System.out.println("Title: " + title);
20          System.out.println("Author: " + author);
21          System.out.println("Price: " + price);
22      }
23
        Run | Debug
24      public static void main(String[] args) {
25          Book book = new Book(bookID: 101, title: "Java Programming", author: "John Smith", price: 4
26          book.displayBook();
27      }
28  }
```

Output	1)  2) 
Conclusion	Packages help organize a Java project into logical, reusable units, prevent naming conflicts between classes, and support access control. Separating related classes into their own packages, as with the student/faculty and library examples, makes larger applications easier to structure and maintain .
