CSE - Academic Year 2026-27

Java Programming – Lab (Batch 2025-29)

Lab Assignment No:- 13

Name of Student	Abobakr mohamed elameen
PRN No.	25070122015
Batch	2025-29
Class	Programming with JAVA
Academic Year & Semester	2nd Year – 3rd Sem
Title of Assignment	Write a Java program to perform reading from and writing to a file using file handling operations.
Practice questions	1. Create a program to write and read employee details from a file.

```java
import java.io.FileWriter;
import java.io.FileReader;
import java.io.BufferedReader;
import java.io.IOException;

public class Employeefiledemo {
    public static void main(String[] args) {
        String fileName = "employee.txt";

        try (FileWriter writer = new FileWriter(fileName)) {
            writer.write("Emp ID: 101\n");
            writer.write("Name: Rohit Sharma\n");
            writer.write("Salary: 55000\n");
        } catch (IOException e) {
            System.out.println("Error writing file: " + e.getMessage());
        }

        try (BufferedReader reader = new BufferedReader(new FileReader(fileName)))
{
            String line;
            System.out.println("---- Employee Details ----");
            while ((line = reader.readLine()) != null) {
                System.out.println(line);
            }
        } catch (IOException e) {
            System.out.println("Error reading file: " + e.getMessage());
        }
    }
}
```

2. Create a Java program to write patient details (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

```java
package JAVA_EXP_13;

import java.io.FileWriter;
import java.io.FileReader;
import java.io.BufferedReader;
import java.io.IOException;

public class Patientfiledemo {
    public static void main(String[] args) {
        String fileName = "patient.txt";

        try (FileWriter writer = new FileWriter(fileName)) {
            writer.write("Patient ID: P001\n");
            writer.write("Name: Sneha Patil\n");
            writer.write("Age: 34\n");
            writer.write("Diagnosis: Viral Fever\n");
        } catch (IOException e) {
            System.out.println("Error writing file: " + e.getMessage());
        }

        try (BufferedReader reader = new BufferedReader(new FileReader(fileName)))
{
            String line;
            System.out.println("---- Patient Details ----");
            while ((line = reader.readLine()) != null) {
                System.out.println(line);
            }
        } catch (IOException e) {
            System.out.println("Error reading file: " + e.getMessage());
        }
    }
```

Output

1)

employee.txt

```
Emp ID: 101
Name: Rohit Sharma
Salary: 55000
```

2)

patient.txt

```
Patient ID: P001
Name: Sneha Patil
Age: 34
Diagnosis: Viral Fever
```

Conclusion	Java's java.io package provides simple, reliable classes for reading from and writing to text files, enabling data to persist beyond a single program run. Using try-with-resources alongside these classes ensures files are closed properly and errors are handled gracefully, making file handling both safe and easy to apply to real-world data like employee or patient records.
