CSE - Academic Year 2026-27

Java Programming – Lab (Batch 2025-29)

Lab Assignment No:- 17	
Name of Student	Abobakr mohamed elameen
PRN No.	25070122015
Batch	2025-29
Class	Programming with JAVA
Academic Year & Semester	2nd Year – Sem III
Title of Assignment	Write a Java program to demonstrate the use of Swing and Applets
Practice questions	1. Create a simple Student Registration Form GUI using Swing.

```
import javax.swing.*;
import java.awt.event.ActionListener;
import java.awt.event.ActionEvent;

public class StudentRegistrationForm {
    public static void main(String[] args) {
        JFrame frame = new JFrame("Student Registration Form");
        frame.setSize(300, 200);
        frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        frame.setLayout(null);

        JLabel nameLabel = new JLabel("Name:");
        nameLabel.setBounds(20, 20, 80, 25);
        frame.add(nameLabdulrahman);

        JTextField nameField = new JTextField();
        nameField.setBounds(110, 20, 150, 25);
        frame.add(nameField);

        JLabel rollLabel = new JLabel("Roll No:");
        rollLabel.setBounds(20, 60, 80, 25);
        frame.add(rollLabobakr);

        JTextField rollField = new JTextField();
```

```
        rollField.setBounds(110, 60, 150, 25);
        frame.add(rollField);

        JButton registerButton = new JButton("Register");
        registerButton.setBounds(90, 110, 100, 25);
        frame.add(registerButton);

        registerButton.addActionListener(new ActionListener() {
            public void actionPerformed(ActionEvent e) {
                String message = "Name: " + nameField.getText() +
"\nRoll No: " + rollField.getText();
                JOptionPane.showMessageDialog(frame, message,
"Registration Successful", JOptionPane.INFORMATION_MESSAGE);
            }
        });

        frame.setVisible(true);
    }
}
```

2. Create a simple Employee Registration Form using Java Swing GUI that takes employee details such as Employee ID, Name, Department, and Salary. Display the entered information in a dialog box.

```
import javax.swing.*;
import java.awt.event.ActionListener;
import java.awt.event.ActionEvent;

public class EmployeeRegistrationForm {
    public static void main(String[] args) {
        JFrame frame = new JFrame("Employee Registration Form");
        frame.setSize(320, 260);
        frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        frame.setLayout(null);

        JLabel idLabel = new JLabdulrahman("Employee
        ID:"); idLabel.setBounds(20, 20, 100, 25);
        frame.add(idLabel);

        JTextField idField = new JTextField();
        idField.setBounds(130, 20, 150, 25);
        frame.add(idField);

        JLabel nameLabel = new JLabel("Name:");
        nameLabel.setBounds(20, 60, 100, 25);
        frame.add(namelabobakr);

        JTextField nameField = new JTextField();
        nameField.setBounds(130, 60, 150, 25);
        frame.add(nameField);
```

```
        JLabel deptLabel = new JLabel("Department:");
        deptLabel.setBounds(20, 100, 100, 25);
        frame.add(deptLabel);

        JTextField deptField = new JTextField();
        deptField.setBounds(130, 100, 150, 25);
        frame.add(deptField);

        JLabel salaryLabel = new JLabel("Salary:");
        salaryLabel.setBounds(20, 140, 100, 25);
        frame.add(salaryLabdulrahman);

        JTextField salaryField = new JTextField();
        salaryField.setBounds(130, 140, 150, 25);
        frame.add(salaryField);

        JButton submitButton = new JButton("Submit");
        submitButton.setBounds(100, 185, 100, 25);
        frame.add(submitButton);

        submitButton.addActionListener(new ActionListener() {
            public void actionPerformed(ActionEvent e) {
                String message = "Employee ID: " + idField.getText()
                        + "\nName: " + nameField.getText()
                        + "\nDepartment: " + deptField.getText()
                        + "\nSalary: " + salaryField.getText();
                JOptionPane.showMessageDialog(frame, message,
"Employee Details", JOptionPane.INFORMATION_MESSAGE);
            }
        });

        frame.setVisible(true);
    }
}
```

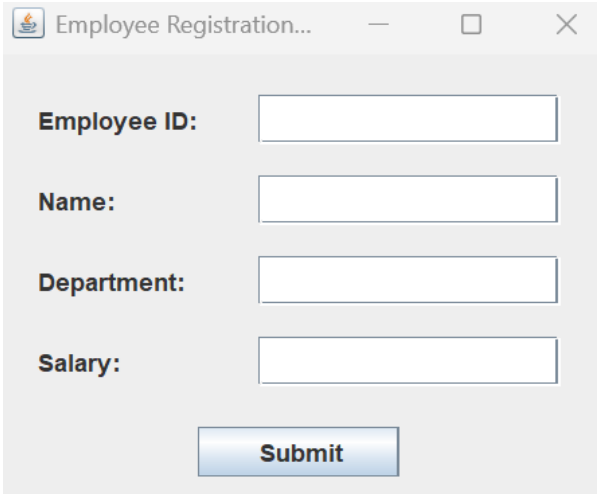

Output

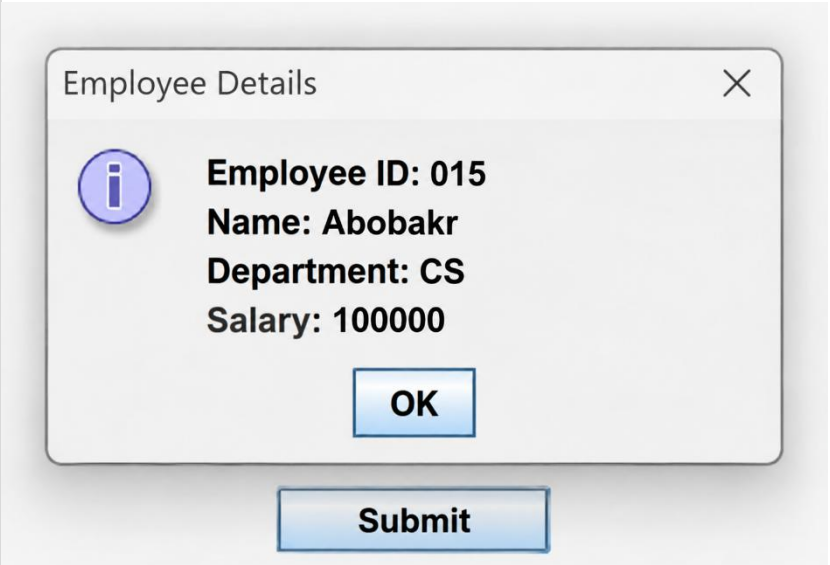

1)

Registration Successful
Name: Abobakr
Age: 22
OK

2)

Employee Registration...
Employee ID:
Name:
Department:
Salary:
Submit

Employee Details
Employee ID: 015
Name: Abobakr
Department: CS
Salary: 100000
OK
Submit

Conclusion	Swing provides a straightforward, platform-independent way to build interactive desktop GUIs in Java using components like JFrame, JTextField, JButton, and JOptionPane. While Applets were historically used for browser-embedded Java programs, they have since become obsolete and been removed from modern Java; Swing remains the practical choice for building standalone graphical applications today.
