Faculty of Engineering

CSE - Academic Year 2026-27

Java Programming – Lab (Batch 2025-29)

Lab Assignment No:- 29

Name of Student	Abbobakr Mohamed
PRN No.	25070122015
Batch	2025-29
Class	Programming with JAVA
Academic Year & Semester	2nd Year – Sem III
Title of Assignment	Develop a Java application to demonstrate the basic concepts of Java Server Pages.
Practice questions	1. Create a JSP page to display student information entered by the user.

studentForm.jsp

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
pageEncoding="UTF-8" %>
<!DOCTYPE html>
<html>
<head>
    <title>Student Form</title>
</head>
<body>
    <h2>Enter Student Information</h2>
    <form action="studentResult.jsp" method="post">
        Name: <input type="text" name="name" required><br><br>
        Roll No: <input type="text" name="rollNo"
required><br><br>
        Course: <input type="text" name="course" required><br><br>
        Marks: <input type="text" name="marks" required><br><br>
        <input type="submit" value="Submit">
    </form>
</body>
</html>
```

studentResult.jsp

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
pageEncoding="UTF-8" %>
<%!
    // JSP declaration: helper method that escapes HTML special
characters in user input
    String esc(String s) {
        if (s == null) return "";
        return s.replace("&", "&amp;").replace("<",
"&lt;").replace(">", "&gt;").replace("\"", "&quot;");
    }
%>
<%
    // JSP scriptlet: read the form data using the implicit
'request' object
    request.setCharacterEncoding("UTF-8");
    String name = request.getParameter("name");
    String rollNo = request.getParameter("rollNo");
    String course = request.getParameter("course");
    String marks = request.getParameter("marks");
%>
<!DOCTYPE html>
<html>
<head>
    <title>Student Information</title>
</head>
<body>
    <h2>Student Information</h2>
    <p><b>Name:</b> <%= esc(name) %></p>
    <p><b>Roll No:</b> <%= esc(rollNo) %></p>
    <p><b>Course:</b> <%= esc(course) %></p>
    <p><b>Marks:</b> <%= esc(marks) %></p>
    <a href="studentForm.jsp">Enter another student</a>
</body>
</html>
```

2. Create a JSP application that takes user registration details such as Name, Email, Phone Number, and Password, and displays the submitted information on a result JSP page.

registrationForm.jsp

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
pageEncoding="UTF-8" %>
<!DOCTYPE html>
```

```
<html>
<head>
    <title>User Registration</title>
</head>
<body>
    <h2>User Registration</h2>
    <form action="registrationResult.jsp" method="post">
        Name: <input type="text" name="name" required><br><br>
        Email: <input type="email" name="email" required><br><br>
        Phone Number: <input type="text" name="phone"
required><br><br>
        Password: <input type="password" name="password"
required><br><br>
        <input type="submit" value="Register">
    </form>
</body>
</html>
```

registrationResult.jsp

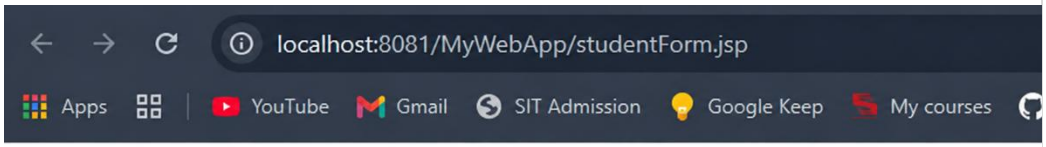

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
pageEncoding="UTF-8" %>
<%!
    // JSP declaration: helper method that escapes HTML special
characters in user input
    String esc(String s) {
        if (s == null) return "";
        return s.replace("&", "&amp;").replace("<",
"&lt;").replace(">", "&gt;").replace("\"", "&quot;");
    }
%>
<%
    // JSP scriptlet: read the form data using the implicit
'request' object
    request.setCharacterEncoding("UTF-8");
    String name = request.getParameter("name");
    String email = request.getParameter("email");
    String phone = request.getParameter("phone");
    String password = request.getParameter("password");

    // Mask the password so it is not shown in plain text
    String maskedPassword = (password == null) ? "" :
password.replaceAll(".", "*");
%>
<!DOCTYPE html>
<html>
<head>
    <title>Registration Details</title>
```

```
</head>
<body>
    <h2>Registration Successful</h2>
    <p><b>Name:</b> <%= esc(name) %></p>
    <p><b>Email:</b> <%= esc(email) %></p>
    <p><b>Phone Number:</b> <%= esc(phone) %></p>
    <p><b>Password:</b> <%= maskedPassword %></p>
    <a href="registrationForm.jsp">Register another user</a>
</body>
</html>
```

Output

1)

Enter Student Information

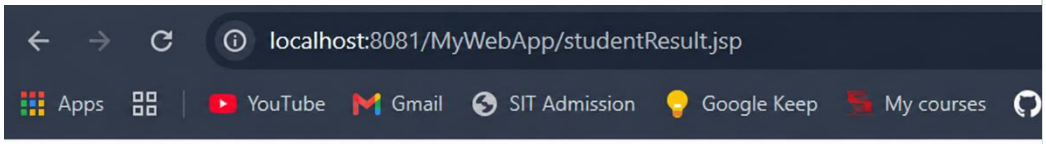

Name: Abobakr

Roll No: 015

Course: JAVA

Marks: 90

Submit

Student Information

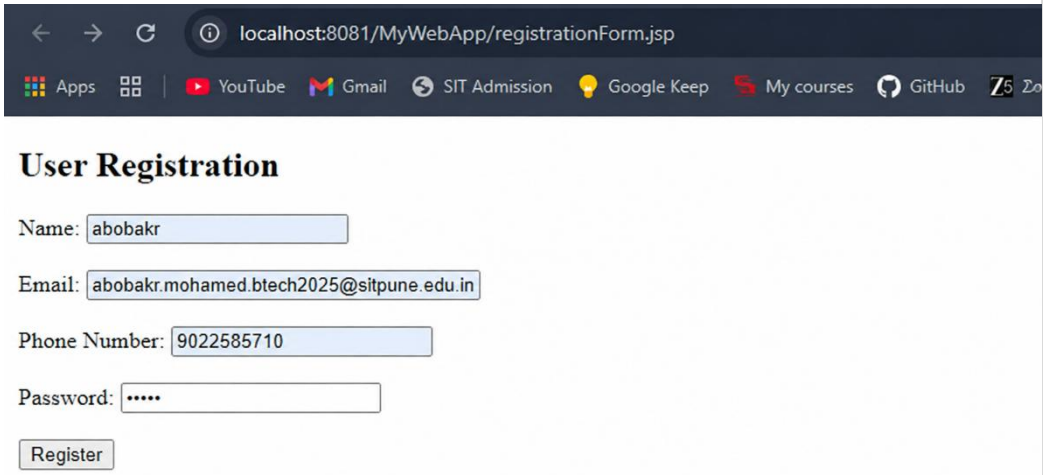

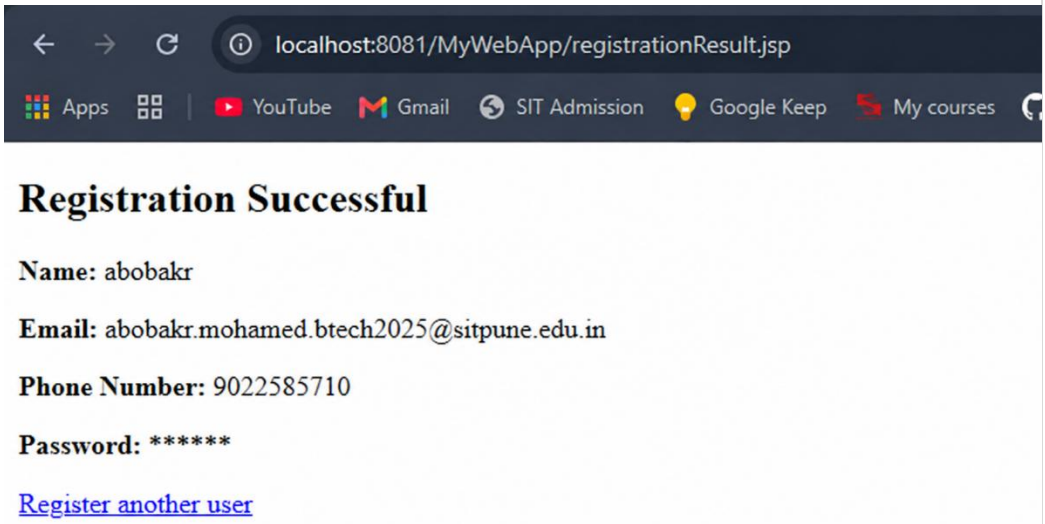

Name: Abobakr

Roll No: 015

Course: JAVA

Marks: 90

Enter another student

	2) 
	
Conclusion	JSP lets a web page mix HTML with Java code so the content can change with user input. The server translates each JSP into a servlet and runs it, so the browser only receives plain HTML. Using a form page to collect data and a separate result page to display it keeps the presentation apart from the processing, and it is the basis of larger Java web applications that work with servlets and JDBC.
