Re-Accredited by NAAC with 'A++' Grade

Name: Abobakr mohamed

PRN: 25070122015

Branch: CSE (2025-29)

Semester: 3

Subject: Programming with Java

ASSIGNMENT No.: 8

TITLE: Write a Java program to demonstrate the use of the super keyword in inheritance.

Problem Statement:

Write a Java program to demonstrate the use of the super keyword in inheritance.

Learning Objectives:

To demonstrate the use of the super keyword for accessing parent class members.

Theory:

The super keyword is used to refer to the immediate parent class in Java. It can invoke parent class constructors, access parent class variables, and call overridden methods. Super helps distinguish between parent and child class members with the same name. It ensures proper constructor chaining during object creation. It is an important concept in inheritance and method overriding.

Outcomes:

The `super` keyword was successfully used to invoke parent class constructors, access parent class variables, and call parent class methods that were overridden in the child class, as verified through the sample programs.

```
class Animal {
String name = "Animal";

Animal() {
System.out.println("Animal constructor called");
}

Animal(String name) { this.name = name;
System.out.println("Animal parameterized constructor called");
}

void sound() {
System.out.println("Animals make sounds");
}
}

class Dog extends Animal { String name = "Dog";

Dog() {
super("Generic Animal"); System.out.println("Dog constructor called");
}

void sound() { super.sound();
System.out.println("Dog barks");
}

void showNames() {
System.out.println("Child class variable (this.name) : " + this.name);
System.out.println("Parent class variable (super.name): " + super.name);
}
}

public class JAVA_EXP_8 {
public static void main(String[] args) { Dog d = new Dog(); System.out.println();

d.sound(); System.out.println();
d.showNames();
}
}
```

```
[Running] cd "c:\Users\M-Mamoun Albrair\OneDrive\Desktop\New folder (4)\ " && javac JAVA_EXP_8.java && java JAVA_EXP_8
Animal parameterized constructor called
Dog constructor called

Animals make sounds
Dog barks

Child class variable (this.name) : Dog
Parent class variable (super.name): Generic Animal

[Done] exited with code=0 in 4.69 seconds
```

Conclusion:

The `super` keyword is essential in Java inheritance for maintaining a link between a subclass and its superclass. It enables constructor chaining, resolves naming conflicts between parent and child members, and allows reuse of parent class behaviour inside overridden methods, making code more modular and maintainable.

Exercise:

1. Create an Employee and Manager program where Manager accesses Employee details using `super` keyword.

```
class Employee_ {  
  
    String empName;  
    int empId;  
    double salary;  
  
    Employee_(String empName, int empId, double salary) {  
        this.empName = empName;  
        this.empId = empId;  
        this.salary = salary;  
    }  
  
    void displayEmployeeDetails() {  
        System.out.println("Employee Name : " + empName);  
        System.out.println("Employee ID   : " + empId);  
        System.out.println("Salary       : " + salary);  
    }  
}  
  
class Manager extends Employee_ {  
  
    String department;  
    double bonus;  
  
    Manager(String empName, int empId, double salary, String department, double bonus)  
    {  
        super(empName, empId, salary);  
        this.department = department;  
        this.bonus = bonus;  
    }  
  
    void displayManagerDetails() {  
        super.displayEmployeeDetails();  
        System.out.println("Department : " + department);  
        System.out.println("Bonus      : " + bonus);  
        System.out.println("Total Pay  : " + (salary + bonus));  
    }  
}
```

```
public class JAVA_EXP_8 {  
  
    public static void main(String[] args) {  
  
        Manager m = new Manager("Bkor", 015, 55000, "Sales", 5000);  
        m.displayManagerDetails();  
  
    }  
}
```

```
[Running] cd "c:\Users\M-Mamoun Albrair\OneDrive\Desktop\New folder (4)\\" && javac JAVA_EXP_8.java && java JAVA_EXP_8  
Employee Name : Bkor  
Employee ID   : 13  
Salary       : 55000.0  
Department   : Sales  
Bonus        : 5000.0  
Total Pay    : 60000.0  
  
[Done] exited with code=0 in 2.356 seconds
```

2. Develop a Vehicle Insurance System where child insurance classes access parent vehicle information using the super keyword.

```
3. class Vehicle {
4.
5.     String vehicleNumber;
6.     String vehicleType;
7.     int manufactureYear;
8.
9.     Vehicle(String vehicleNumber, String vehicleType, int manufactureYear) {
10.         this.vehicleNumber = vehicleNumber;
11.         this.vehicleType = vehicleType;
12.         this.manufactureYear = manufactureYear;
13.     }
14.
15.     void showVehicleInfo() {
16.         System.out.println("Vehicle Number : " + vehicleNumber);
17.         System.out.println("Vehicle Type : " + vehicleType);
18.         System.out.println("Manufacture Yr : " + manufactureYear);
19.     }
20. }
21.
22. class CarInsurance extends Vehicle {
23.
24.     double premiumAmount;
25.     String coverageType;
26.
27.     CarInsurance(String vehicleNumber, int manufactureYear,
28.         double premiumAmount, String coverageType) {
29.
30.         super(vehicleNumber, "Car", manufactureYear);
31.         this.premiumAmount = premiumAmount;
32.         this.coverageType = coverageType;
33.     }
34.
35.     void showPolicyDetails() {
36.
37.         super.showVehicleInfo();
38.         System.out.println("Coverage Type : " + coverageType);
39.         System.out.println("Premium Amount : " + premiumAmount);
40.
41.         if (2026 - manufactureYear > 10) {
42.             System.out.println("Note: Additional premium applies for vehicles older than 10 years.");
43.         }
44.     }
45. }
46.
47. class BikeInsurance extends Vehicle {
48.
49.     double premiumAmount;
50.     boolean thirdPartyOnly;
51.
52.     BikeInsurance(String vehicleNumber, int manufactureYear,
53.         double premiumAmount, boolean thirdPartyOnly) {
```

```

54.
55.     super(vehicleNumber, "Bike", manufactureYear);
56.     this.premiumAmount = premiumAmount;
57.     this.thirdPartyOnly = thirdPartyOnly;
58. }
59.
60. void showPolicyDetails() {
61.
62.     super.showVehicleInfo();
63.     System.out.println("Third Party Only : " + thirdPartyOnly);
64.     System.out.println("Premium Amount : " + premiumAmount);
65. }
66. }
67.
68. public class JAVA_EXP_8 {
69.
70.     public static void main(String[] args) {
71.
72.         CarInsurance car = new CarInsurance(
73.             "MH12AB1234", 2012, 8500.0, "Comprehensive");
74.         car.showPolicyDetails();
75.
76.         System.out.println();
77.
78.         BikeInsurance bike = new BikeInsurance(
79.             "MH14XY5678", 2021, 1200.0, true);
80.         bike.showPolicyDetails();
81.     }
82. }

```

```

[Running] cd "c:\Users\M-Mamoun Albrair\OneDrive\Desktop\New folder (4)\\" && javac JAVA_EXP_8.java && java JAVA_EXP_8
Vehicle Number : MH12AB1234
Vehicle Type   : Car
Manufacture Yr : 2012
Coverage Type  : Comprehensive
Premium Amount : 8500.0
Note: Additional premium applies for vehicles older than 10 years.

Vehicle Number : MH14XY5678
Vehicle Type   : Bike
Manufacture Yr : 2021
Third Party Only : true
Premium Amount  : 1200.0

[Done] exited with code=0 in 2.53 seconds
